ROBITARY

ASSIGNMENT 1

UI/UX

Name: Harmain Fatima

UI/UX GROUP

ROBITOARY UI/UX TASK 1

Analysis of WhatsApp

Selected App:

WhatsApp UI/UX

1. Good UI

WhatsApp has a simple chat screen. Contact names, messages, and the message box are easy to recognize. The familiar icons help users understand where to tap.

2. Bad UI

When a user has many chats, the chat list can become crowded. Important conversations may move down the list, and it can take extra time to find a particular chat.

3. Good UX

WhatsApp makes it easy to send messages, photos, voice notes, and documents. A user can open a conversation, type a message, and send it in a few simple steps.

4. Bad UX

A user may accidentally send a message to the wrong group or contact if they do not check the chat name carefully. Finding an old message can also take time when the user does not remember a keyword.

Conclusion

A good UI helps people understand the screen, while a good UX helps them complete tasks easily. WhatsApp's familiar layout and quick messaging make it convenient. It could improve the experience by making important chats and message search easier to manage. Suggested Improvement: Use pinned chats and chat filters to keep important conversations easy to find. Before sending a message, users should also check the conversation name, especially in groups.
